INSTRUCTION BASICS

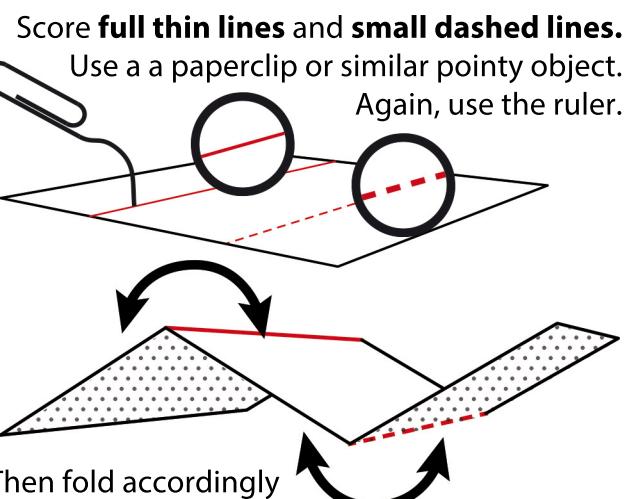

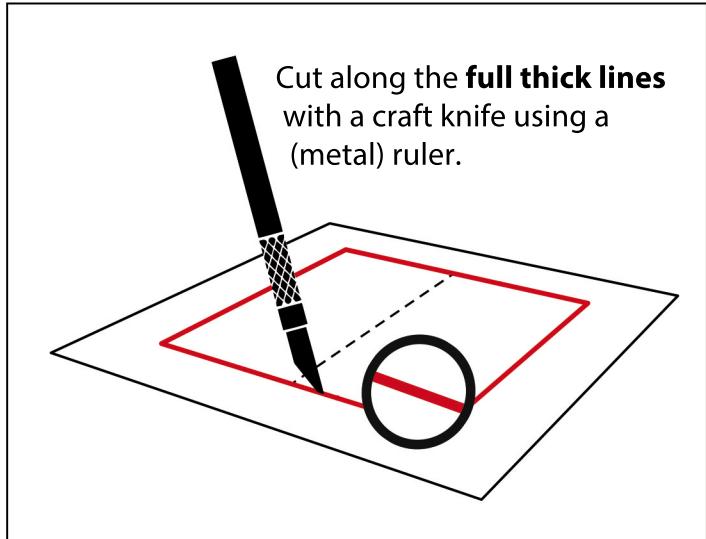

ファンダメンタルズ

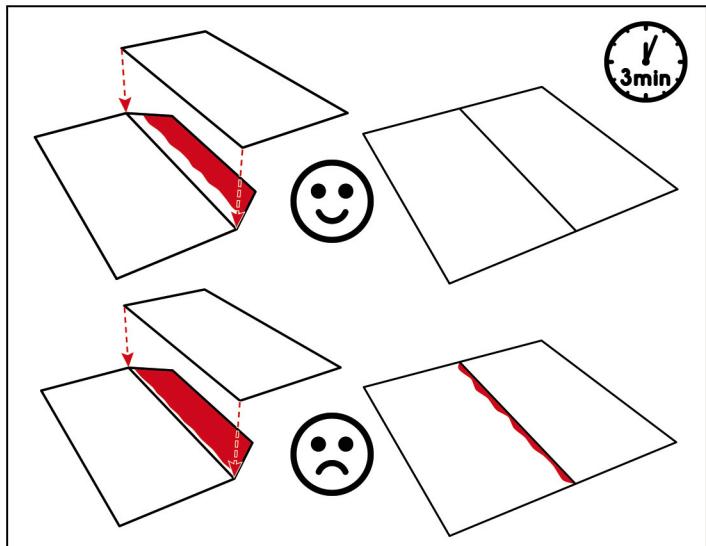

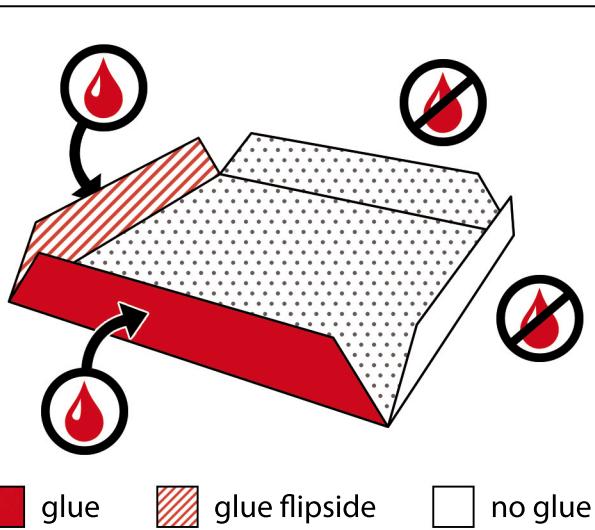

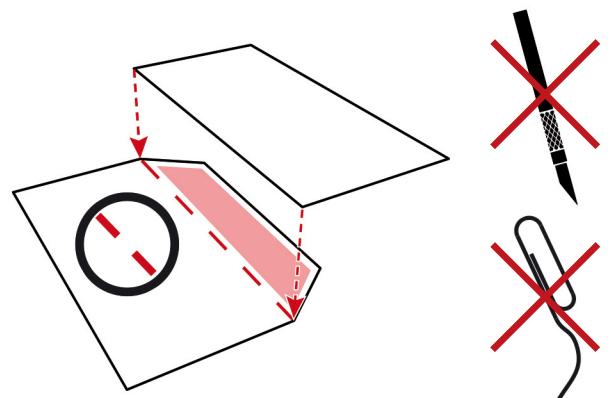

1. Take your time and work carefully.
2. Keep in mind that each sheet has two sides. Lines and part labels are printed on the **upside**. The **downside** is blank and represented by dots here.

3. Before applying glue, carefully cut and score each part as shown here on this page.
4. Use glue with care! Too much glue will squeeze out of the flaps, causing rage and madness.
5. It's good practice to spread glue evenly with a small, torn off piece of paper.

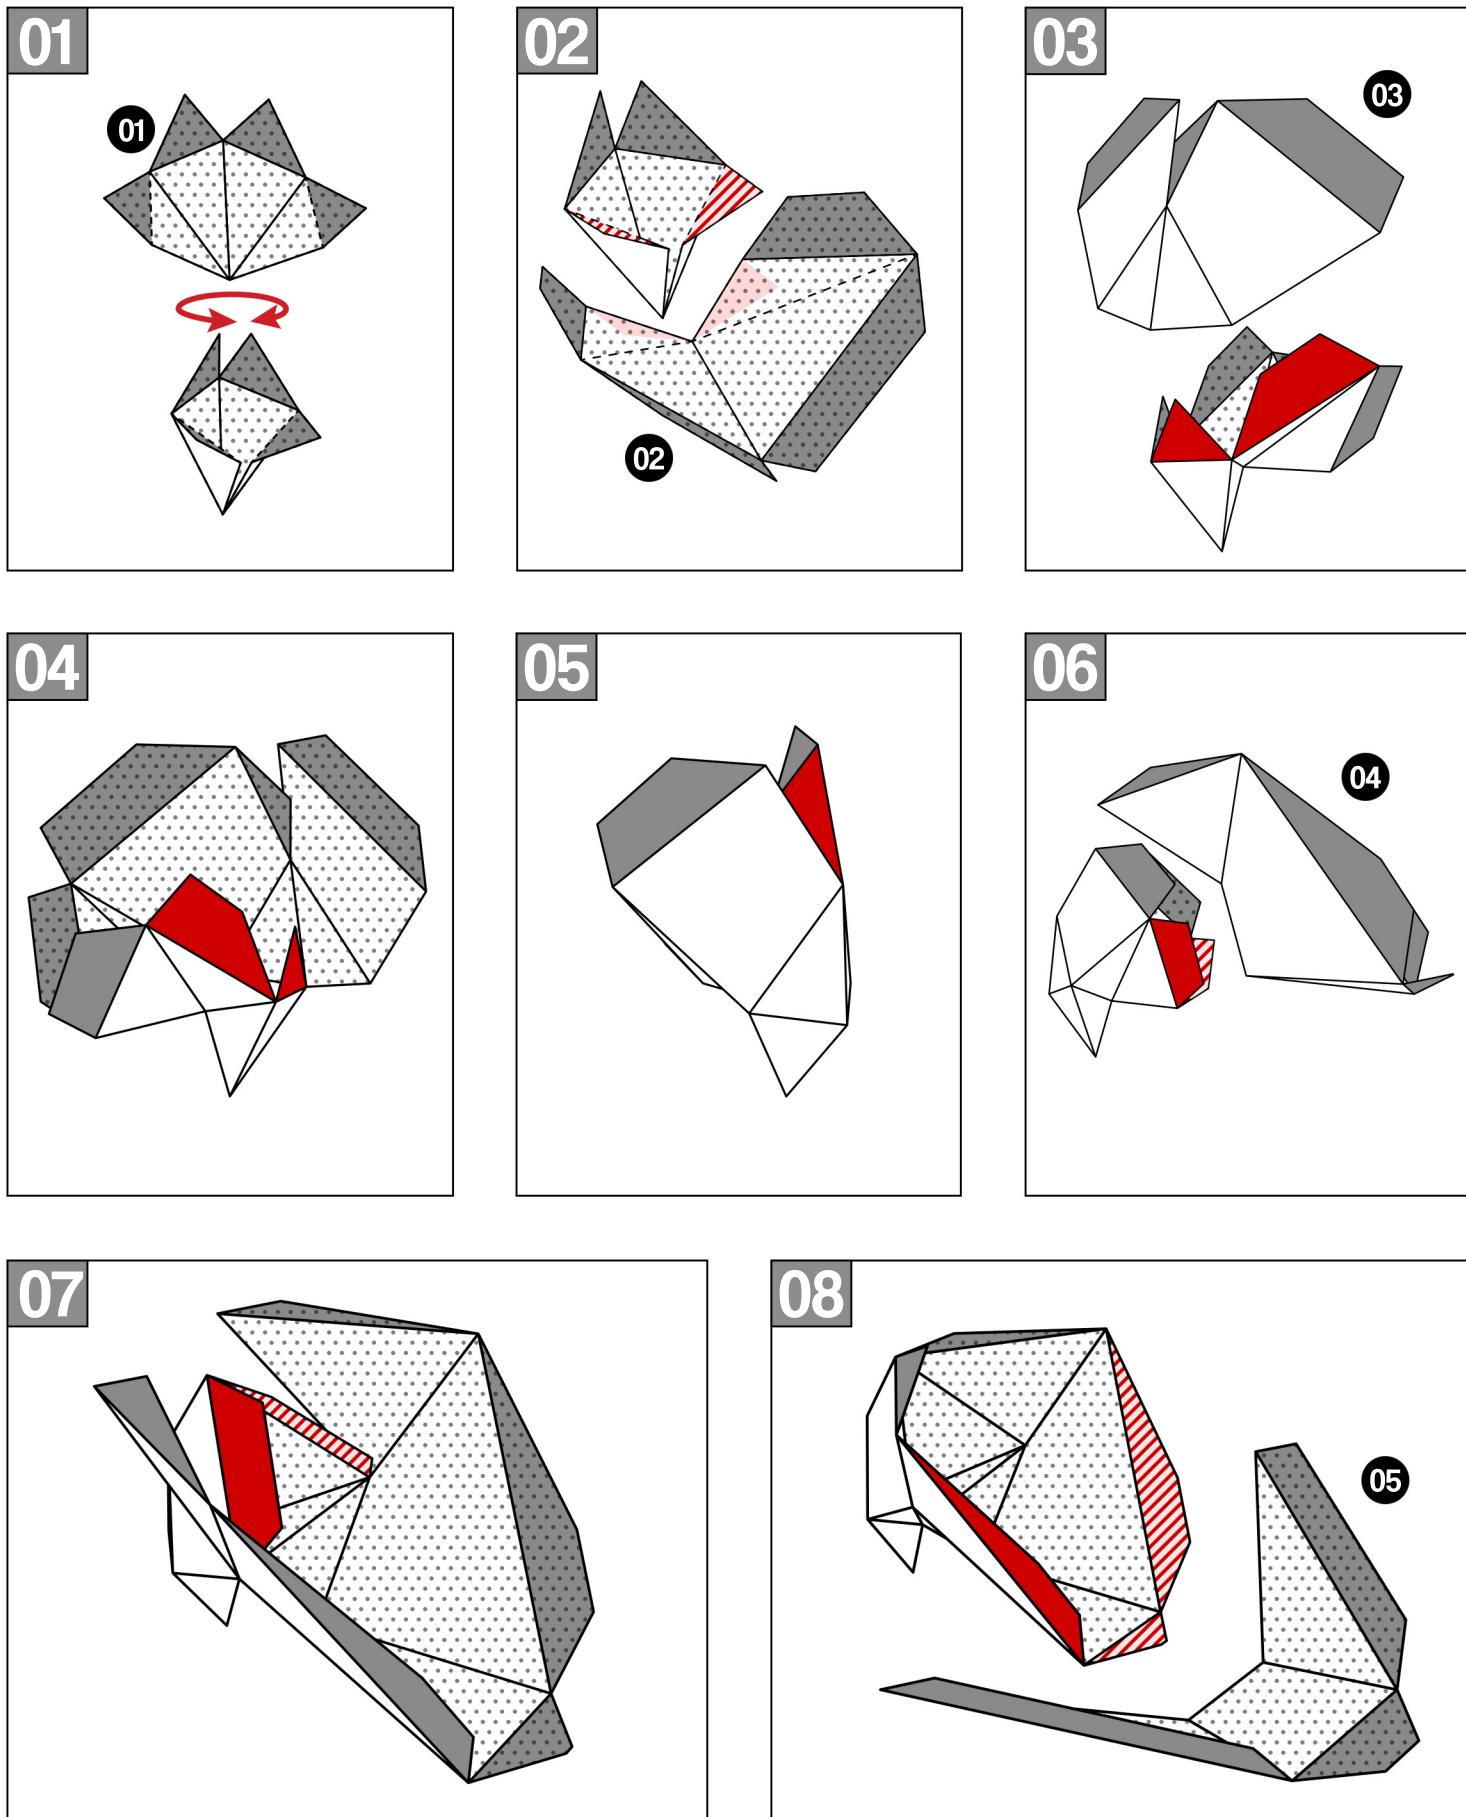

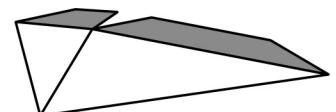

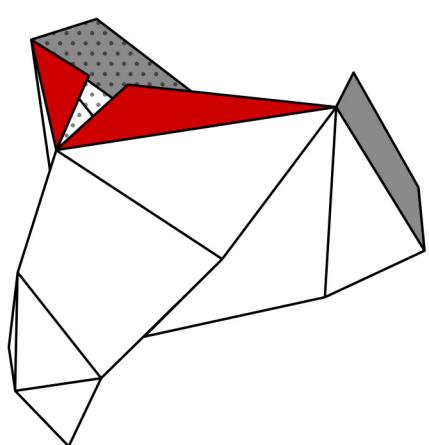

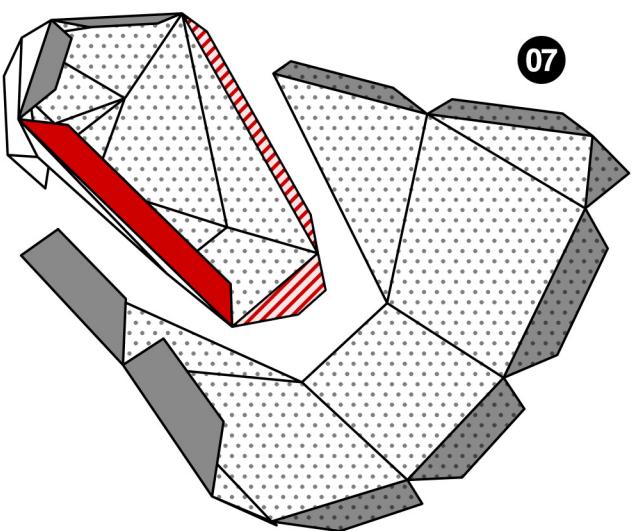

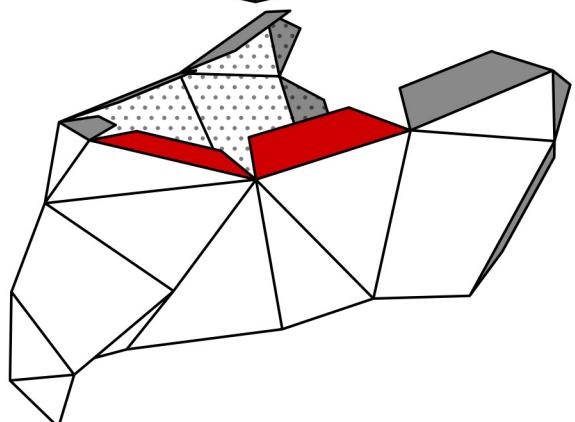

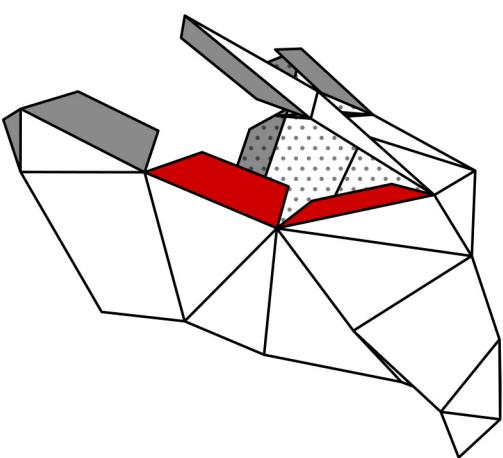

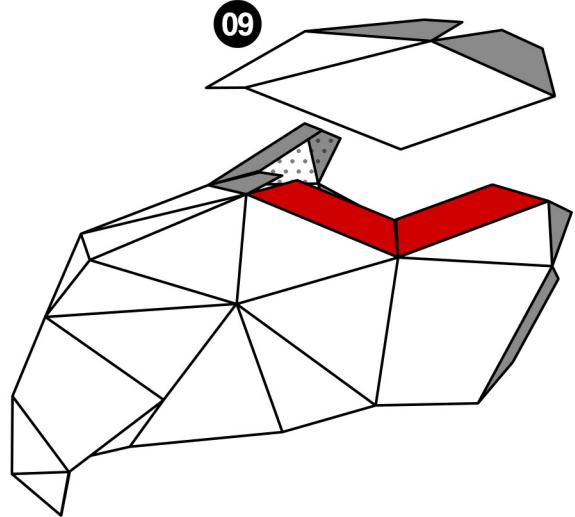

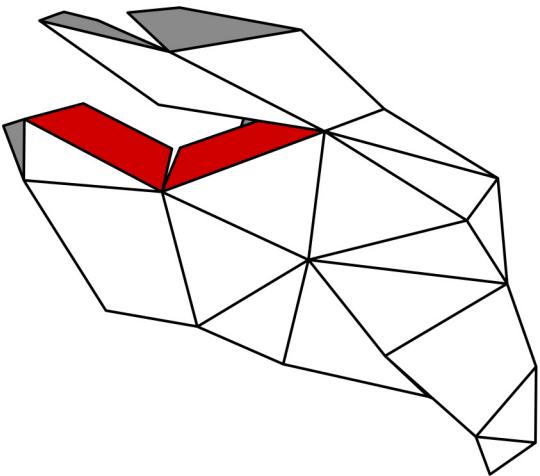

Large dashed lines tell you how to position parts when gluing. **Don't score or fold them!**
